An introduction to graph analysis and modeling

Introduction

MSc in Statistics for Smart Data – ENSAI

Automn semester, 2018

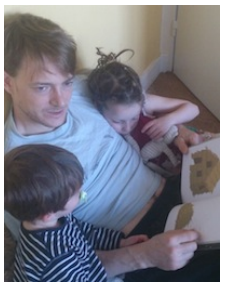
`http://github/jchiquet/CourseStatNetwork`

Teacher

UMR 518 ArgroParisTech/Inra

https://www6.inra.fr/mia-paris

Julien Chiquet



Researcher at Inra

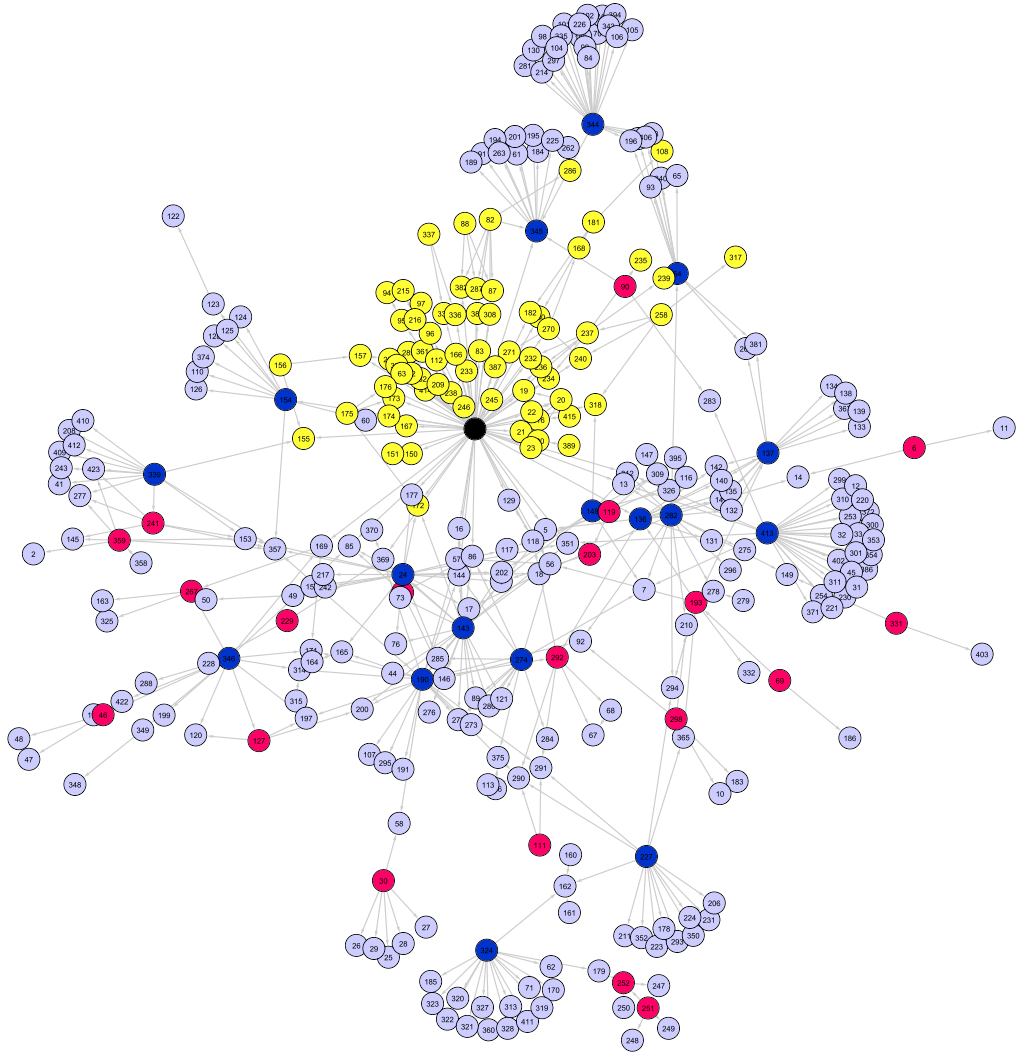
julien.chiquet@inra.fr

Motivation 1

Unravel the latent organization of an observed network

E. coli regulatory network

- relationships between gene and their products
- inhibition/activation



Motivation 1

Unravel the latent organization of an observed network

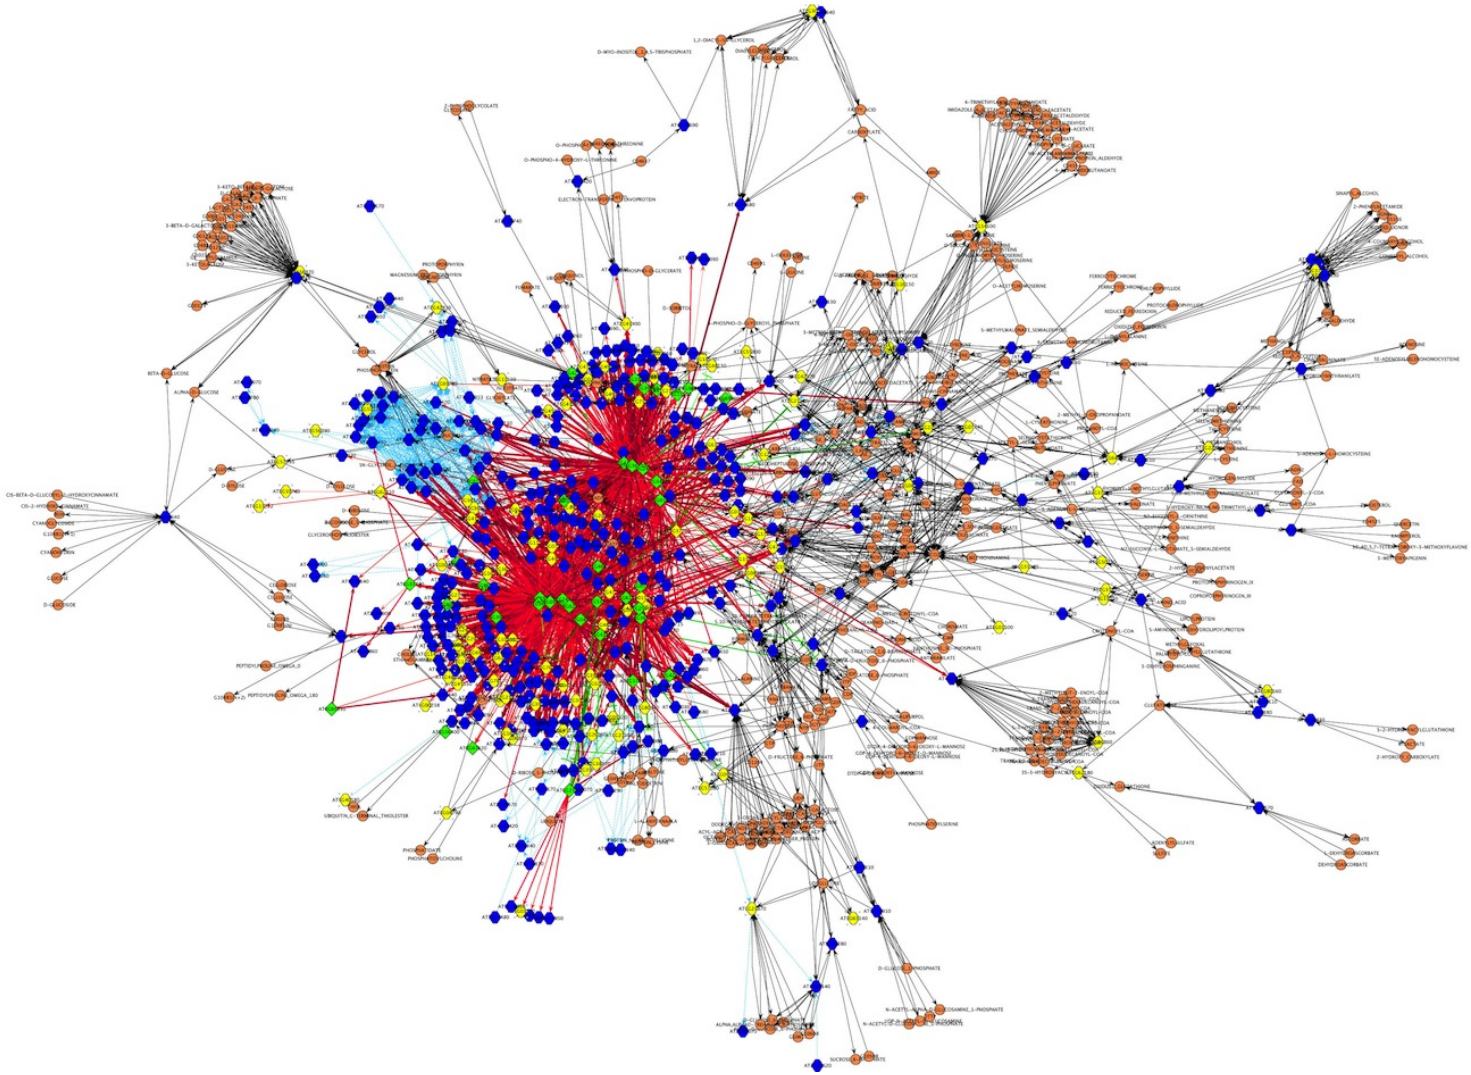


Figure: Regulatory network identified in mammalian cells: highly organized

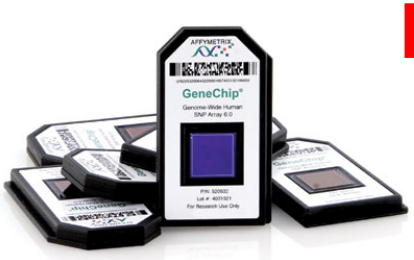
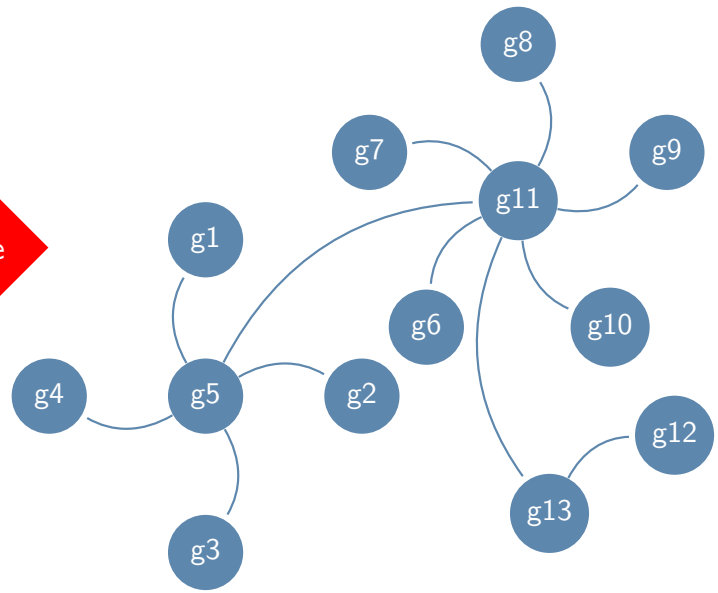
Motivation 2

Reconstruct an network to capture important features of a system



Inference



$\approx$ 10s/1000s assays

$\approx$ 1000/100,000s features

Agenda (expected...)

first day Descriptive Analysis of Network Data (06/11)

1. Basic on Graphs
2. Descriptive Statistics
3. Graph Partionning

second day Statistical Models for Networks Data (15/11)

1. Stochastic Block Model

third day Extensions of the SBM and project preparation (22/11)

1. Accouting for Covariates
2. Multiplex networks
3. Latent Block Model

Module Assessment

1. Practicals
   - each session comes with Practical on `R`
   - send me a small `R`-markdown report at the end of the session
2. Projects (more on this later)
   - article review
   - application project
   - implementation of an algorithm

General books in Statistical Learning and networks

`https://github.com/jchiquet/CourseStatNetwork`

- Graphical Models in Applied Multivariate Statistics, Joe Whittaker
- Graphical Models, S. Lauritzen
- Statistical Analysis of Network Data with R, Eric Kolazcyk
- Pattern recognition and Machine Learning, C. Bishop
- The Element of Statistical Learning Hastie, Tibshirani, Friedman
